

# COVID-19

+ stay informed

## I'm fully vaccinated, now what?

Guidance as of 04/29/2021

When fully vaccinated (2 weeks after the 2-dose series [mRNA vaccines] or 2 weeks after a single dose of the Janssen vaccine), it is recognized you are well-protected from severe COVID-19 disease and less likely to spread the virus if you are infected.

### If you've been fully vaccinated:

- You can gather indoors with fully vaccinated people without wearing a mask or staying 6 feet apart.
- You can gather indoors with unvaccinated people of any age from one other household (for example, visiting with relatives who all live together) without masks or staying 6 feet apart, unless any of those people or anyone they live with has an increased risk for severe illness from COVID-19.
- You can gather or conduct activities outdoors without wearing a mask except in certain crowded settings and venues.
- If you travel within the United States, you do not need to get tested before or after travel, or self-quarantine after travel.
- You need to pay close attention to the situation at your international destination before traveling outside the United States.
  - You do NOT need to get tested before leaving the United States unless required by your destination.
  - You still need to show a negative test result or documentation of recovery from COVID-19 before boarding an international flight to the United States.
  - You should still get tested 3-5 days after returning from international travel.
  - You do NOT need to self-quarantine after arriving in the United States.
- If you've been around someone who has COVID-19, you do not need to stay away from others or get tested unless you have symptoms.

**However**, if you live in a group setting (like a correctional or detention facility or group home) and are around someone who has COVID-19, you should still stay away from others for 14 days and get tested, even if you don't have symptoms.
